

Vedant Patel

Technical Product Manager

Email: vedantpatel.a@gmail.com 

LinkedIn: patel-vedant 

Website: vedantpatel.github.io 

Technical

Languages: Java, Python, JavaScript, SQL, HTML/CSS, BASH

Cloud: AWS Lambda, S3, EC2, API Gateway, CloudFormation, Cognito, Google GKE, GCP bucket, Pub/Sub

Database: Postgres, MYSQL, Teradata Vantage, MongoDB, DynamoDB

Other: Flyte, DataHub, Spring Framework, Hibernate, Terraform, IBM CloudPak, Protegrity, Postman, Jenkins, Git, Docker, Kubernetes, Selenium, TensorFlow, Android

Certification

AWS Certified Solution Architect – Associate

Projects

CVS COVID-19 VaccineBot

Developed a program which will send text alerts for vaccine availability by continuously monitoring CVS vaccine website.

InstagramBot

Developed a program which displays list of users that are not following back and users that you are not following back.

Sentiments Analysis

Developed a program which identifies how positive a particular tweet is using sentiment analysis on tweets.

Handwritten Text Analysis

Developed a program to analyze handwritten text using different activation functions.

Education

University of Connecticut, Storrs CT

08/2015 – 05/2019

B.S.E Computer Science & Engineering,
Concentration in Computational Data Analytics

Experience

ObvioHealth, NYC NY

10/2022 – Present

Technical Product Manager

- Platform Team

Freenome, NYC NY

05/2022 – 10/2022

Software Engineer II

- Contributed on application which transforms source clinical data to OMOP and FHIR from HL7 using python, GCP services, and created design doc on future enhancements.
- Processed healthcare workloads on GCP using Flyte and stored complex metadata in DataHub.

Cigna, NYC NY

06/2021 – 05/2022

Senior Software Engineer

- Developed REST APIs and interfaced with core platform services to tokenize sensitive data, which is currently being beta tested internally using python and AWS services.
- Implemented and integrated parsing functionality in SSO to process attribute-based access for internal applications hosted in cloud.
- Created insightful RLS dashboard using Apache Superset.
- Initiated improvement on internal technical processes, revamping Git Workflow, increasing automated testing coverage, and documenting knowledge gaps.

Lockheed Martin, Stratford CT

07/2019 – 06/2021

Software Engineer

- Collaborated with team to develop Microservice application using Java, Spring, Hibernate, AWS services such as Lambda, S3, API Gateway, and DynamoDB.
- Designed and developed service and system architecture to securely generate aircraft related reports with business-related customization that is projected to increase efficiency by 30% and significantly reduce overhead management cost.
- Integrated API Gateway and AWS Lambda into web application to fetch customer-oriented data from DB using RESTful APIs.
- Teamed with product team to understand end-user requirement, formulate use cases, and then translating into technical solution.
